Cold Room Racking

Brand:
Product Code: 98189
Availability: In Stock
Weight: 0.00kg
Dimensions: 0.00cm x 0.00cm x 0.00cm

Short Description
Cold room racking is a specialized storage system designed to efficiently store temperature-sensitive goods in controlled environments, such as freezers or refrigerated warehouses.

Description
Cold room racking is a highly efficient and durable storage solution tailored for environments requiring strict temperature control, such as cold storage facilities, freezers, and refrigerated warehouses. These systems are engineered to maximize storage capacity while maintaining the integrity of perishable goods like food, beverages, and pharmaceuticals.

Constructed from materials like stainless steel or galvanized steel, cold room racks are designed to withstand extreme temperatures and resist corrosion. They are available in various configurations, including selective racking, drive-in racking, and mobile racking, to suit different storage needs. These systems ensure optimal airflow and temperature distribution, preserving the quality and shelf life of stored products.

Cold room racking is ideal for businesses in the food, pharmaceutical, and logistics industries, offering a cost-effective way to optimize storage space, improve inventory management, and maintain compliance with cold chain requirements.

Specifications
Material: Stainless steel or galvanized steel for durability and corrosion resistance.

Temperature Range: Suitable for environments as low as -30°C.

Load Capacity: Varies by design, typically supporting up to 2,000 kg per level.

Height: Adjustable to fit the vertical space of the cold room.

Configuration Options: Selective racking, drive-in racking, mobile racking, and pallet flow systems.

Airflow Design: Ensures even temperature distribution and prevents warm spots.

Finish: Powder-coated or galvanized for enhanced durability.

Customizability: Adjustable shelves and configurations to meet specific storage needs.
